

work spaces. Users can remove both cutting heads and inserts as a single assembly, and index and reinstall them. Manufacturers can also use a

second toolholder set to efficiently exchange cutting heads and inserts. The toolholders include cutting heads for general ISO turning, MDT, threading and parting-off.

Live and Static Lathe Tools

The Citizen tool program from Platinum Tooling is a line of live and

static tools for Swiss-type CNC automatic lathes, including most Citizen lathes. Tooling includes high-quality bearings, ground gear components, spindles, and housings to

produce tools with maximum rigidity, according to the manufacturer.

Web Server Module

Designed to mount directly onto a drive, the Sinamics V20 Smart Access web server module transforms a mobile device or laptop into a virtual operator panel for drive control. By providing a Wi-Fi hot spot, the wireless connection on the module facilitates setup, programming, commissioning, production monitoring and maintenance on various

machines and production equipment. Smart Access provides access to the V20, up to 100 m away, even when the

drive is located in difficult-to-access installations. Using WPA2 security, the module works with iOS and Android operating systems, as well as commonly used web browsers.

High-Feed Milling Cutter

The Xtra-tec XT M5008 is an indexable, high-feed milling cutter that comes in 5/8 to 2.5" (16 to 63.5-mm) diameters, and permits high feed per tooth at low axial depths of cut. Various grades and chipbreakers are available

so that it can be used universally for steel and stainless steel, as well as for cast iron and hard materials with difficult cutting properties. The cutters feature a shallow approach angle, low radial load on the tool, plus a short and stable peripheral cutting edge.
